

Verdi – modified viscose fibre

Verdi is an anionic viscose fibre with a pronounced core-sheath-structure.

Its **key properties** are:

- Self extinguishing

In burning behaviour tests Verdi exhibits self-extinguishing properties.

Its LOI is similar to the LOI of FR polyester.

- Water vapour and moisture management

Verdi absorbs twice as much water vapour and approximately 60 % more water than standard viscose.

- Non-sticking surface effect

In wet state Verdi fibres and products made from them have a non-sticking surface effect.

- **Self-bonding properties** deliver higher dry-strength to papers and wetlaid constructions.

- Anionic charge of Verdi fibre:

- Helps protecting the natural pH of the skin.
- Gives significantly higher affinity to cationic dyestuffs than standard viscose but no negative impact on dyeability using substantive dyes.

Cross section of Verdi

Applications:

Verdi can be used in 100% or in blends with other fibres such as viscose, cotton or synthetics for

- Functional, water vapour and moisture regulating textiles
- Self-extinguishing night- and underwear
- Absorbent materials such as wound dressings, highly absorbent wipes

Processing:

Verdi can be processed on ring spinning equipment, nonwoven and wetlaid technologies.

Properties / Availability:

Tenacity (cN / tex)	17 – 22
Elongation at break (%)	18 - 21
Water retention (%)	140 – 180
Water vapour absorption (%)	18

Other dtex / staple lengths are available on request.

Decitex	1.7, 3.3
Staple (mm)	30, 40
Wet short cut (mm)	3, 4, 5, 6, 8, 10, 12
Lustre	bright
